Training

3.

the majority of the units in all army areas were at their posts and engaged in routine winter training. The training of recruits was still the prominent feature in the training program of all units which consisted of basic training with

SECRET-CONTROL/US OFFICIALS ONLY

SECRET/CONTROL - U.S. OFFICIALS ONLY

CENTRAL INTELLIGENCE AGENCY

50X1-HUM

-5-

and without arms, mostly in the billeting areas proper; and field and combat training, including combat firing practice, mostly in the vicinity of the posts. The tank units were engaged in technical instruction as well as driving and firing practice with individual tanks in the field. Several units began training at platoon level as early as January 1951. Units at some military posts, such as POTSDAM and DESSAU-ROSSLAU, rotated their elements to newly-constructed field emplacements and shelters in nearby woods and training areas, where they continued training under conditions similar to those in the field.

organizational AAA units had their personnel man AA gun emplacements for training purposes. No large-scale winter exercises were conducted prior to the middle of January 1951.

camp buildings were winterized, it is believed that, in the course of the winter training program, some units may have already held, or are going to hold, such exercises.

50X1-HUM

Arrival of Personnel and Replacements

4. From 29 December to 2 January 1951, a total of 48 boxcars with troops arrived in the Soviet Zone of Germany, going via KUESTRIN as usual. Some of them were coupled to empty, westbound shuttle-trains. No such movements were subsequently observed up to the middle of January 1951. The troops may have been recruits arriving behind schedule, or specialists.

50X1-HUM

5. The influx of officer replacements into the Soviet Zone of Germany continued up to mid-January 1951. in JUETERBOG alone 450 officers arrived, who were billeted together and attended courses in LUCKENWALDE.

50X1-HUM

6. The volume of daily leave traffic through FRANKFURT/Oder was about the same as during recent months. While only one pair of trains daily was running on the FRANKFURT/Oder-BREST LITOVSK line during the summer months of 1950, a second pair began daily runs on that line on 24 October 1950. Since 24 January 1951, the second pair of leave trains has run only four days of the week.
7. The strength of the Soviet Army personnel in the Soviet Zone of Germany is estimated at 290,000 men, not including SCC or LVD/MGB. (1)
8. Unlike the large-scale shipments of artillery pieces and trucks which arrived in the Soviet Zone of Germany from the U.S.S.R. in December 1950, the materiel shipped to the Soviet Zone of Germany between 1 and 19 January 1951 included no artillery pieces, but 43 used motor vehicles, 20 new motor vehicles, and 44 full-track 7-ton vehicles, probably tractors, 22 of which were bound for LUDWIGSLUST and 22 for WEIMAR.

Movements

50X1-HUM

9. In mid-November 1950, the barracks installation at the MEURUPPIN airfield was vacated by Soviet Army units. The 34th Gds Mtz Rifle Regt of the 12th Gds Tank Div had been located there up to that time. Since motor vehicles of the 12th Gds Tank Div were subsequently observed at the barracks installation of DROEGEN near FUERSTENBERG, it was believed that the 34th Gds Mtz Rifle Regt was transferred to DROEGEN.

The headquarters units of the Second Gds Mecz Army which were previously stationed in DROEGEN probably moved to the Weisse Stadt settlement, ORANIEBURG.

50X1-HUM

CENTRAL INTELLIGENCE AGENCY

-6-

50X1-HUM

10. The situation in the WUENSDORF-ZOSSEN area, which was not reoccupied by companies of the 19th Gds Mecz Div in the fall of 1950, has remained unchanged since December 1950. Reconditioning work in most of the installations there was scheduled to last until the end of January 1951. (2)

[redacted] a high-echelon headquarters was to be accommodated in the former German Panzertruppen Schule.

50X1-HUM

11. [redacted] artillery units, perhaps of the unidentified AT Arty Brig, possibly the 3d Gds, of the LXXIX Ptz Rifle Corps, have been permanently stationed at ALTENGRABOW during the winter. Prior to the fall of 1950, the quarters at ALTENGRABOW were occupied by components of the unidentified AAA Div, possibly the 32d, of the GOPG.

50X1-HUM

50X1-HUM

12. According to newspaper dispatches [redacted]

[redacted] private quarters in the Thuringian border area were requisitioned for Soviet personnel, and Volkspolizei units assigned to border duty [redacted] were replaced by Soviet troop units. Simultaneously, [redacted] residents were evicted in several towns, including OBERHOF, SUHL, MEININGEN, and WELKERSHAUSEN. [redacted] a Soviet high-echelon headquarters would be set up in OBERHOF. However, [redacted] no such measures were observed in the towns mentioned up to 25 January 1951. On the other hand, [redacted] border guard detachments were reinforced by Soviet troops have been received at an increased rate since early January 1951, [redacted]

50X1-HUM

AUSTRIAGeneral

50X1-HUM

13. The overall disposition of the Soviet ground troops of the Central Group of Forces in the Soviet Zone of Austria remained unchanged up to the middle of January 1951.

14. The components of the Soviet divisions in Austria were at their posts during the first half of January 1951. Their winter training program probably corresponded to that of the units in the Soviet Zone of Germany.

15. The following units in the Soviet Zone of Austria, [redacted] location, and date of observation, were confirmed between 1 January and 1 February 1951:

A Motor Trans Bn of the
Central Group of Forces

LAXENBURG

26 December

18. [redacted] the 55th Tng
Regt, is located in the BRUCK area. It is probably directly subordinate to the
Hq Central Group of Forces, because the training units of divisions are only
of battalion strength.

19. There are indications that some unidentified units are stationed in ALLENTSTEIG.
They probably belong to the 95th Gds Mtz Rifle Div.

Personnel

20. In December 1950, about 1,000 officers from the U.S.S.R. arrived in VIENNA. Most
of them were company-grade officers up to 30 years of age. This influx of of-
ficers fairly definitely indicates that, as in the Soviet Zone of Germany,
officer replacements arrived in the Soviet Zone of Austria on a large scale. It
is believed that by using these officers and taking other measures, such as the
commissioning of suitable NCOs, the Central Group of Forces is bringing its
officer personnel up to full authorized strength and in addition, is establishing
an officer replacement pool. [redacted] the shipment of officers from VIENNA
to the east, probably toward BUDAPEST, indicates that the officers who recently
arrived in VIENNA were also reassigned to units of the Central Group of Forces
in Hungary.

50X1-HUM

U.S.S.R.

Estimate of the Strength of Soviet Army Personnel in the Soviet Zone of Germany1. Basis for Calculation

50X1-HUM

a. Percentage of Actual Strength Compared with Wartime T/O:

--

Actual strength	Strength according to	Percentage of actual strength
	A: Peacetime strength	
	B: Wartime T/O	

Topo Plat of an Arty Bn of the 676th How Arty Regt of the 6th Gds Mecz Div in BERNAU (Date: 25 December 1950): 1 officer, 6 NCOs, 4 EM. Total: 11	A: 1; 2; 7 B: 1; 4; 12	A: 110 percent B: 65 percent	50X1-HUM
4th Btry (122-mm How) of the 676th How Arty Regt of the 6th Gds Mecz Div (Date: 13 November 1950): 5 officers, 12 NCOs, 33 EM. Total: 50	A: 4; 16; 28 B: 4; 16; 45	A: 104 percent B: 77 percent	
III How Bn of the 233d Gds How Arty Regt of the 95th Gds Mtz Rifle Div in Austria (Date: 21 March 1950): 21 officers, 48 NCOs, 123 EM; Total: 192	A: 21; 55; 95 B: 21; 55; 164	A: 112 percent B: 80 percent	

The table indicates that the established and authentic actual strengths represent approximately 110 percent of the peacetime T/O and approximately 75 percent of the wartime T/O. Data concerning 50X1-HUM

units of not less than battalion size must be used for an estimate, since with smaller units the percentage is considerably influenced by even one vacancy. Assuming that the units stationed in Austria have approximately the same actual strength as the units stationed in Germany, the strength listed for the howitzer battalion of the 233d Gds How Arty Regt in Austria can be taken as an appropriate basis for calculation. Artillery units may possibly have an actual strength nearer to the wartime T/O than infantry units since the latter can more easily be brought to full strength within a short time. On the other hand, replacements who arrived in the fall of 1950, as well as personnel demobilized at the same time have not been taken into consideration in the strength of the howitzer battalion, dated March 1950. On the basis of these reflections, the present actual strength of all combat units in Germany was assumed in the calculation to be 75 percent of the wartime T/O. Judging from the examples listed, it is believed that three different T/O and E exist in the Soviet Army: first, wartime T/O and E in the event of mobilization; second, peacetime T/O and E for units in the interior of the U.S.S.R. of about 67 to 70 percent of the wartime T/O and E; and third, special T/O and E for units in occupation areas and border sectors of the U.S.S.R. of about 75 to 80 percent of the wartime T/O and E.

SECRET-CONTROL/US OFFICIALS ONLY

SECRET/CONTROL - U.S. OFFICIALS ONLY

CENTRAL INTELLIGENCE AGENCY

50X1-HUM

ANNEX

-2-

b. Strength of the Rear Services

In 1944 the strength of the rear services of a Soviet front (now group) above division level was estimated at 18.3 percent of the wartime T/O of the subordinate combat troops. In peacetime, the strength of the rear services is believed to be well below that, even in occupation areas, since the supply requirements are reduced and the German civilian transportation and repair installations are used by units down to division. On the basis of rough estimates, the army rear services were put at 6 percent of the strength of the combat and headquarters units of an army, and the GOFG rear services at 2 percent of the total strength of all armies.

c. Increase of the Motor Vehicle Equipment

50X1-HUM

No useful calculative basis can be developed [redacted] for the calculation of increases in personnel strengths, since the percentage of increase in motor vehicle equipment evidently exceeded that of the increase in personnel. To illustrate, approximately 1,300 more motor vehicles (or 25 percent) were observed with the Third Shock Army in the summer of 1950 compared with the summer of 1948 while the personnel strength is believed to have increased not more than between 10 and 15 percent.

d. Strengths of the Headquarters and GHQ Units

50X1-HUM

[redacted] the strengths observed during World War II were assumed as T/O and E for the estimate of the strength of the headquarters and GHQ units. While 75 percent of the wartime T/O and E were assumed for GHQ units, the strengths of the headquarters were assumed in full wartime strength, since observations indicated that their personnel strength is high in the occupation areas.
